WARNING

Read all precautions and instructions in this manual before using this equipment. Save this manual for future reference. Maximum user weight 250 lbs.

IMPORTANT

Trampoline / Enclosure’s are susceptible to winds. Be sure to secure your Trampoline / Enclosure. Wind Damage is not covered in the warranty of your trampoline.
Model **SST15G**

A serial number decal is found on one of the trampoline legs. Model number decal tag is located on the mat.

Monday—Friday, 8 a.m.—5 p.m. Mountain Time

**REPLACEMENT PARTS**

www.skywalkertrampolines.com

**! WARNING**

Read the assembly, installation, care, maintenance, and use instructions in this manual prior to assembling and using this trampoline. Save this manual for future reference.
IMPORTANT PRECAUTIONS

! WARNING: To reduce the risk of serious injury, read and follow all of the warnings, precautions, and instructions in this manual before you assemble (put together) and use the trampoline.

1. It is the responsibility of the owner and supervisors of this trampoline to make sure all users obey the safety instructions printed in this manual.

2. Be sure the trampoline is on a level surface before you use it.

3. Be sure there is enough clear space above the trampoline before you use it. It is best to have at least 24 feet of clear space above the ground. This space must be clear of wires, tree limbs, and any other possible hazards.

4. Lateral (sidewise) clearance is very important. Place the trampoline where it is not near walls, buildings, fences, sidewalks, and other play areas. Always keep a clear space on all sides of the trampoline.

5. Use the trampoline in an area with lots of light. If the trampoline is in a shady area, you may need to use artificial (electrical) lighting in the area.

6. Be sure to have authorization from the owners of the trampoline. Always have someone there to supervise when it is being used. If you use a ladder to get on the trampoline, be sure it is removed when the trampoline is not being used.

7. Always inspect the trampoline before it is used and replace any worn, defective, or missing parts. (Jumpers may be hurt if the trampoline is used when it is in poor condition.)

8. Remove any objects from under the trampoline.

9. This trampoline is made for users who do not weigh more than 250 pounds. Children less than 6 years old should not jump on it or use the trampoline.

10. Do not let more than one person jump on the trampoline at the same time. Two or more people jumping at the same time can cause someone to be badly hurt.

11. If you do not use the trampoline correctly someone can be seriously hurt.

12. The trampoline should only be used with a proper understanding of the safety precautions, and under adult supervision.

13. Always climb onto and off of the trampoline. Never jump onto it or off of it. Do not use the trampoline to bounce you to other objects.

14. You can get hurt if you hit the frame or fall through the springs when you get onto or off of the trampoline, or when you are jumping on it. Stay in the center of the mat when jumping. Be sure the frame pad is securely in place to cover the trampoline frame before you use it. The frame pad is not made to support your weight. Never step or jump directly onto the frame pad.

15. The trampoline is a bouncing device that bounces the jumper higher than he is used to jumping. It can also cause many different body movements than the jumper is used to. Bouncing off of the trampoline, hitting the frame or springs, or landing on the mat wrong can cause the jumper to get hurt.

16. Do not try to do somersaults (flips), or let someone else do somersaults, as it can cause a broken head, neck, back, or leg. Even if you land in the middle of the mat, landing on your head or neck can cause you to be badly hurt, become paralyzed, or even die.

17. Jumpers who lose control of their jump may land on the mat wrong, land on the frame or springs, or fall off of the trampoline. Trying to do stunts you don’t know how to do can cause you to get hurt.

18. Do not use the trampoline if you have been using alcohol or drugs. These things cause you to not be able to move as fast, have poor judgment, and have poor physical coordination.

19. Do not jump on the trampoline while you have or are holding something, especially something that is sharp or breakable.

20. Bounce only when the top of the mat is dry. There should be little or no air movement. The trampoline must not be used in gusty or strong winds.
TRAMPOLINE SAFETY INFORMATION

In trampoline use, as in all active recreational sports, participants can be injured. However, there are steps that can be taken to reduce the risk of injury. In this section, primary accident patterns are identified and the responsibilities of supervisors and jumpers in accident prevention are described.

ACCIDENT CLASSIFICATION

Somersaults (flips): Landing on your head or neck, even in the middle of the trampoline mat, increases the risk of a broken back or neck, which can result in paralysis or death. Such events can occur when a jumper makes an error trying to perform a forward or backward somersault (flip). Do not perform somersaults (flips) on this backyard trampoline.

Multiple Jumpers: More than one jumper at a time on the trampoline increases the chance of a jumper becoming injured by losing control of his or her jump. Jumpers may collide with one another, fall off of the trampoline, fall onto or through the springs, or land incorrectly on the mat. The jumper weighing the least is the jumper most likely to be injured.

Mounting and Dismounting (Getting On and Off): The trampoline mat is several feet above ground level. Jumping from the trampoline to the ground or any other surface may result in injury. Jumping onto the trampoline from a roof, deck, or other objects also presents a risk of injury. Smaller children may need assistance getting onto or down from the trampoline. Climb carefully onto and off of the trampoline. Do not step onto the springs or the frame pad. Do not grasp the frame pad to pull yourself onto the trampoline.

Striking the Frame or the Springs: Injury may result from hitting the frame or falling through the springs while jumping or getting onto or off of the trampoline. Stay in the center of the mat when jumping. Be sure to keep the frame pad in place to cover the frame. The frame pad is not made or intended to support the weight of the trampoline user. Do not step or jump directly onto the frame pad.

Loss of Control: Jumpers who lose control of their jumps may land on the mat incorrectly, land on the frame or springs, or fall off of the trampoline. A controlled jump is one where the landing is in the same spot as the takeoff. Before learning a more difficult stunt, you should be able to do the one before repeatedly with control. Attempting a stunt beyond present skill levels increases the chance of loss of control. To regain control and stop your jump, bend your knees sharply when you land.

Alcohol or Drug Use: The chance of injury increases when a jumper has consumed alcohol or taken drugs. These substances impair a person’s reaction time, judgment, and physical coordination.

Encountering Objects: Jumping on a trampoline while other people, pets, or objects are underneath it will increase the chance of getting hurt. Jumping while holding or having an object on the trampoline, particularly one that is sharp or breakable, will increase the chance of injury. Placing a trampoline too close to overhead electrical wires, tree limbs, or other objects can increase the chance of injury.

Poor Maintenance of the Trampoline: Jumpers may be injured if a trampoline is used when it is in poor condition. A torn mat, bent frame, broken spring, or missing frame pad, for example, should be replaced before anyone is allowed to jump. Inspect the trampoline before each use.

Weather Conditions: A wet trampoline mat is too slippery for safe jumping. Gusty or high winds can cause jumpers to lose control. To reduce the chance of injury, use the trampoline only when the weather is good.

Access: To prevent access to the trampoline by unsupervised smaller children, the optional access ladder should always be taken away and stored in a safe place when the trampoline is not in use.
METHODS OF ACCIDENT PREVENTION

The Supervisor’s Role in Preventing Accidents

It is the responsibility of the owners of trampoline users to provide knowledgeable and mature supervision. They need to know and enforce all of the rules and warnings printed in this manual to minimize the likelihood of accidents and injuries. They also need to inform users of these rules. During periods of time when supervision is unavailable or inadequate, this may require that the trampoline is taken down, placed in a secure area, or otherwise secured against unauthorized use. Another option that may be considered is covering the trampoline with a heavy tarp that can be secured with locks and chains. It is the responsibility of the supervisor to make sure that the placard with TRAMPOLINE SAFETY INSTRUCTIONS (see step 8 on page 14) is kept posted on the trampoline and that jumpers are informed about these instructions.

The Jumper’s Role in Preventing Accidents

Education on the part of the user is a must for safety. Users must first learn a low, controlled bounce and then learn the basic landing positions and combinations before proceeding to intermediate skills. Jumpers must understand why they have to master “control” before they can start thinking about other moves. Understanding the proper progression of skills in jumping on a trampoline must be the first lesson. Review this manual to learn about the basic techniques for using the trampoline. Follow the rules on the placard with TRAMPOLINE SAFETY INSTRUCTIONS (see step 8 on page 14). For further information or additional instructional materials, contact a certified trampoline instructor.

TRAMPOLINE SAFETY INSTRUCTIONS

For the Supervisor

Read the instructions before using the trampoline. Enforce all of the safety rules. Become familiar with the information in this manual so you can help new users learn basic jumps and all users follow trampoline safety. All trampoline users must have mature, knowledgeable supervision, regardless of their skill or age.

This trampoline is not recommended for use by children under 6 years of age.

Inspect the trampoline before using it. Do not use the trampoline without the frame pad securely in place to cover the frame. Do not use the trampoline when it is wet or in a windy condition. A worn or damaged mat, spring, or frame piece should be replaced immediately.

Keep objects away that could interfere with the jumper.

Secure the trampoline against unauthorized and unsupervised use.

For the Jumper

Do not use the trampoline when you have been using drugs or alcohol.

JUMPING

Learn fundamental jumps and body positions thoroughly before trying more advanced skills. Know your own limits in performing each of the trampoline jumps. Study this manual to learn how to do basic jumps.

Stop your bounce by flexing your knees as your feet come in contact with the trampoline mat. Learn this skill before attempting any others.
Avoid jumping too high or for too long. Always control your jump. A controlled jump is one where the landing is in the same spot as the takeoff.

Bounce in the center of the trampoline. Focus eyes on trampoline toward the perimeter. If you don’t do this you may lose your balance and control.

Take turns jumping, one at a time, and always have someone watch you.

GETTING ON AND OFF

Climb onto and off of the trampoline. Do not jump onto or off of it. Do not use the trampoline as a springboard to jump to other objects or places.

For additional information regarding equipment, contact Skywalker Holdings, LLC. For additional information regarding skill training, contact a trained, certificated organization.

USE AND INSTRUCTIONAL MATERIAL

OVERVIEW OF TRAMPOLINE USE

The first periods of trampoline use should focus on learning fundamental body positions and practicing the eight basic bounces that are described on pages 9 and 10.

During this learning period, jumpers should practice these basic techniques and perfect them. Braking, or checking the bounce, should be taught first and stressed as a safety measure. Jumpers should brake their jump whenever they start to lose their balance or control. This is done by simply flexing the knees sharply upon landing and absorbing the upward thrust of the mat. This allows the jumper to stop suddenly and avoid losing control.

With trampoline use, the takeoff point and landing point of a good, controlled jump are in the same spot. An exercise is considered learned only when a jumper is able to perform it correctly time after time. Jumpers should never go on to any advanced stunt until they can perform all previous stunts correctly each time.

Allow each jumper a brief turn on the trampoline. Extended bouncing exposes an overtired user to an increased risk of injury. Longer turns tend to lessen the interest of others waiting to jump. Clothing should consist of T-shirt and shorts. However, beginning jumpers may wish to wear loose-fitting protective clothing, such as a long sleeve shirt and pants, until the correct landings are mastered. Jumpers should wear regulation gymnastic shoes or heavy socks, or they may jump barefoot. No hard-sole shoes should be worn, as they cause extra wear on the trampoline mat.

Mounting and dismounting (getting on and off) properly should be a strict rule from the beginning. Users should climb onto the trampoline by placing their hands on the frame and stepping or rolling up onto the frame, across the springs, and onto the mat. They should not step directly on the frame pad or hold on to the frame pad when getting onto or off of the trampoline. Users should always place their hands on the frame while getting on or off. To get off, jumpers should walk to the side of the mat, bend over and place one hand on the frame, and then step from the mat to the ground. If you have installed the optional ladder, its rungs can be used to get on or off. Always face the ladder and place your hands on the frame. Make sure your foot has secure contact with the ladder rung when using it.

Reckless bouncing should not be permitted. All skills should be learned at moderate heights. Control, rather than height, should be emphasized. Jumpers should be forbidden to practice alone and unsupervised.
INSTRUCTIONAL PROGRAM AND MODEL LESSONS

The following lessons are examples of an instructional program. They should follow a complete discussion and demonstration of body mechanics between the supervisor and the student(s). See pages 9 and 10 for descriptions of basic trampoline skills.

Lesson 1
1. Mounting and dismounting (getting on and off)—Demonstration and practice of proper techniques.
2. Fundamental bounce—Demonstration and practice.
4. Hand and knee drop—Demonstration and practice, stressing four-point landing and alignment.

Lesson 2
1. Review and practice of skills already learned.
2. Knee drop—Half twist to the right, to the left, to the feet, and then to the knees.

Lesson 3
1. Review and practice of skills already learned.
2. Front drop—To save time and avoid mat (bed) burns, all students should be requested to assume the front drop position on the floor while the instructor checks for faults. Suggested progression: from hand and knee bounce, the body is extended for the landing in the front drop position, and the rebound is made to the feet.
3. Practice routine—Hand and knee drop, front drop, feet, seat drop, half twist to feet.

Lesson 4
1. Review and practice of skills already learned.
2. Back drop—Demonstration, emphasizing the forward thrust of the hips by arching the body as one leg is brought forward from the standing (not bouncing) position, and the drop to the back with the chin held forward to the chest and the eyes forward on the frame pad. Spotting this skill is most important. Demonstration of back drop with low bounce and practice of both techniques.

Lesson 5
1. Review and practice of skills already learned, encouraging original routines based on them.
2. Half turntable—Start from the front drop position and push to the left or right with the hands. Turn the head and shoulders in the same direction. Keep the back parallel to the mat and the head up. After completing a half turn, land in the front drop position.

Lesson 6
1. Swivel hips—Suggested progression: seat drop, feet, half twist, repeat; seat drop, half twist to feet, repeat; seat drop, half twist to seat drop.
2. Half turntable.

Lesson 7
The student should now be encouraged to design and organize routines, with emphasis on good form. The instructor may judge or grade students and arrange groupings for further instruction accordingly. To stimulate interest in competition, the game of “Trampoline Horse” can be introduced. Before the game begins, students must count off. To start the game, student number 1 performs a stunt. Student number 2 then mounts the trampoline, performs the same stunt and adds a second stunt. Student number 3 mounts and performs stunts 1 and 2 and adds a third stunt. Thus the series of stunts is continuously lengthened. The first person to miss a stunt in the series assumes the letter “H” and starts a new series with a stunt. If a person misses again, he assumes the letter “O.” When a person accumulates “H-O-R-S-E,” he or she is eliminated from the game. The last remaining contestant is the winner. Lesson planning from this point on should be facilitated by contacting a certified trampoline instructor.
BASIC TRAMPOLINE SKILLS

Fundamental Bounce
1. Start from a standing position with your head erect and your eyes on the frame pad.
2. Swing your arms forward and up in a circular motion.
3. Bring your feet together and point your toes downward while in the air.
4. Keep your feet about 15 inches apart when landing on the mat.

Knee Drop
1. Start bouncing from a standing position, keeping your eyes on the frame pad.
2. Land on your knees, keeping your back straight and your body erect.
3. Come back up to an erect position.

Hand and Knee Drop
1. Start bouncing from a standing position, keeping your eyes on the frame pad.
2. Land on the mat on your hands and knees.
3. Push with your hands and come back up to an erect position.

Back Drop
1. Start from a low bounce and land on your back.
2. Keep your chin forward on your chest as you land.
3. Kick forward and up with your legs to return to an erect position.
### Seat Drop

1. Land in a sitting position with your legs parallel to the mat.
2. Place your hands on the mat beside your hips.
3. Push with your hands to return to an erect position.

### Front Drop

1. Start from a low bounce and land on the mat in a prone position.
2. Keep your head up and your arms extended forward on the mat.
3. Push with your arms to return to an erect position.

### Half Turntable

1. Start from the front drop position and push to the left or right with your arms to begin turning your body in the opposite direction.
2. Turn your head and shoulders toward the direction that your body is turning.
3. Keep your back parallel to the mat and your head up.
4. After completing a half turn, land in the front drop position.

### Swivel Hips

1. Start with a seat drop.
2. Turn your head to the left or right and swing your arms up in the same direction.
3. Turn your hips in the same direction as your head and arms, completing a twist.
4. Land in the seat drop position.
ASSEMBLY

IMPORTANT ASSEMBLY INFORMATION

• Need phillips screw driver (included).
• Assembly requires two persons.
• Wear gloves to protect your hands from pinch points during assembly.

TRAMPOLINE PLACEMENT

1. Place the trampoline on a level surface before using it.
2. Adequate overhead clearance is essential. A minimum of 24 feet from ground level is best. Provide clearance from wires, tree limbs, and other possible hazards. Lateral (sideways) clearance is also essential. Place the trampoline away from walls, structures, fences, and other play areas. Always have a clear space on all sides of the trampoline.
3. Use the trampoline in an area with lots of light. If the trampoline is indoors or in a shady areas you may need to use artificial (electrical) lighting in the area.
4. Secure the trampoline against unauthorized and unsupervised use.
5. Remove any objects from beneath the trampoline.
6. The owner and supervisors of the trampoline are responsible to make all users aware of practices specified in this manual.

1. Make sure that you understand the information in the box at the top of this page.

Lay two Top Tubes with socket (2) and one Top Tube (1) on the ground in the positions shown. Make sure the Top Tubes are turned so the small holes (spring holes) are facing the ground.

Insert the small end of the Top Tube (1) into the socket attached to Top Tube (2) in location C. Insert the small end of the Top Tube with socket (2) in location A into the large end of the top tube(1).

The Top Tubes and Sockets should now appear as shown in step 2, below.

2. Slide two “J” Shaped Leg tubes (3) onto a Brace (4) as shown. The peak of the Brace (4) should point toward the ground. Screw the two Screws (8) into the two Legs (3) and Brace (4).

Insert one of “J” Shaped Leg tubes (3) halfway into one of the Sockets on the top tube (2) assembled in step 1. Insert the other Leg halfway into the other Socket. Press down on both Legs at the same time and fully insert them into the Sockets.

Note: You may need to pull outward on the Legs as you insert them into the Sockets.

Repeat steps 1 and 2 three additional times to assemble three more leg sections.
3. Note: This step requires two persons. During this step, you will connect the four assembled leg sections with the remaining four Top Tubes (1).

Flip two of the leg sections over so that the spring holes are now facing the sky instead of the ground. Stand two leg sections and hold them in the positions shown. Slide the large end of one of the remaining Top Tubes (1) onto the small end of the indicated Top Tube on one of the leg sections. Insert the small end of the Top Tube into the indicated Top Tube with Socket (2) on the other leg section. Repeat this step until all four leg sections are connected. When this step is completed, the frame will be fully assembled and freestanding as shown.

4. Lay the jump mat (5) on the ground inside the assembled frame. **Make sure that the two warning decals are on top of the Mat and are located in the center, between the two legs of the trampoline as shown.**

Note: There are 96 V-rings around the edge of the Mat (5) and 96 holes around the top of the frame. In Steps 4 and 5 you will attach the Mat (5) to the frame, using 96 Springs (9).

**Note:** If you purchased the Trampoline Combo, when assembling the jump mat, you must first attach the enclosure mesh to the jump mat, referring to step 3 in enclosure manual, then attach the jump mat to the trampoline frame. If you did not purchase a Trampoline Enclosure, disregard this paragraph.

**Caution:** It is wise to wear leather gloves while attaching the Springs. Be careful where you place your hands as the Springs and frame joints can pinch.

Attach the Springs (9) as follows: Start from the warning label locations of the jump mat (5). Hook one end of a Spring (9) into a V-ring sewn on the Jump mat. Hook a Spring tool (10) shown as the inset drawing in next page to the free end of the Spring (9). Pull it by the spring tool (10) until it reaches the frame. Push the end of the Spring into a hole in the frame. Unhook the Spring tool.

After you have hooked one Spring (9) into one of the V-rings on the Mat (5), count exactly 24 V-rings and 24 frame holes in a clockwise direction. Attach a second Spring to the V-ring and frame at this point. Count 24 V-rings and 24 frame holes in a clockwise direction and attach a third Spring. Count 24 V-rings and 24 frame holes in a clockwise direction and attach a fourth Spring.
5. After attaching the first four Springs (9) in step 4, start from the first spring you attached in step 4. Count exactly 12 V-rings and 12 frame holes in a clockwise direction. Attach another Spring to the V-ring and frame at this point. Count 24 V-rings and 24 frame holes in a clockwise direction and attach another Spring. Count 24 V-rings and 24 frame holes in a clockwise direction two additional times and attach another two Springs. You will now have 8 evenly spaced Springs (9) attaching the jump mat (5) to the trampoline frame (not shown).

Attach eight Springs (not shown) evenly between the eight attached Springs in the same manner as before.

Attach sixteen Springs (not shown) evenly between the sixteen attached Springs.

Continue to attach the remaining Springs between the previously attached Springs, until all Springs are attached.

**Safety Note:** For the jump mat (5) to have the even tension necessary for safety in jumping, the Springs (9) must be attached as described. As you attach Springs, carefully count the V-rings and frame holes. If a V-ring or hole is skipped, reattach the Springs in the proper position.

6. Lay the Frame Pad (6) on the frame. Adjust the position of the Frame Pad so that the holes of the pad are just above the holes of the socket of frame, as shown.

**Note:** If you are using the Trampoline Enclosure, refer to the Trampoline Enclosure User’s Manual, pages 8-11, for instructions on assembling the Enclosure. The Enclosure must be assembled and secured to the trampoline frame before attaching the frame pad and proceeding further with trampoline assembly.

**Caution:** Do not use the trampoline without the Frame Pad (6). The Frame Pad is designed to reduce the possibility of injuries due to jumpers coming in contact with the trampoline frame. If you do not have a Frame Pad, contact your dealer to obtain one. Properly install the Frame Pad before using the trampoline.

7. Look underneath the trampoline. Locate the straps attached to the underside of the frame pad. Position each outer strap so that one strap is on each side of the frame as shown. Tie the outside straps sewn to the Pad Joints to the near springs, and attach the inner straps to the near V-rings.

Refer to the inset drawing. While holding the short strap with the buckle, wrap the long strap under the frame. Then thread the long strap through the buckle on the short strap as shown. Pull the end of the longer strap to tighten straps. Do not overtighten the straps. Leave a 1/4 inch gap.

Repeat this step with the remaining straps (not shown).
8. Using the included plastic tie, attach the Safety Placard to the frame near the point where jumpers will climb onto and off the trampoline.

Attach Accessories Bag (7) to Frame as shown.

9. Note: The step 9 is only for the trampoline without the enclosure. Insert the square inner cap (11) into the top hole of the socket, and insert the end cap (12) into the bottom hole of the socket as shown.

Cover the holes on the pad by the small covers sewn on the pad.

10. The trampoline is now fully assembled. Make sure that all parts are securely attached. Familiarize yourself and all users of the trampoline with the safety precautions, use and instructional materials, and care and maintenance instructions in this manual before using the trampoline.

**DISASSEMBLY (TAKING APART)**

To disassemble (take apart) the trampoline, follow assembly steps 1 through 8 in reverse order. Do not attempt to disassemble any frame parts before the springs and the mat have been removed. Use gloves to protect your hands from pinch points while taking the trampoline apart.
CARE AND MAINTENANCE

CARE

Do not allow pets on the trampoline, as their claws may snag and pull the mat material or damage the frame pad.

The trampoline is intended to be used by one person at a time who weighs not more than 250 pounds. The user should be either barefoot, wearing socks, or wearing gymnastic shoes. Street shoes or tennis shoes should not be worn on the trampoline. The user should remove all sharp objects from his or her person that may cause injury or damage to the mat. Heavy, sharp, or pointed hard objects should never touch the mat.

MAINTENANCE

Your trampoline was manufactured using quality materials and crafted to provide you and your family with many years of enjoyment and exercise. Proper maintenance and care will help to prolong the life of the trampoline and reduce the possibility of injury. The following guidelines should always be followed.

Inspect the trampoline before each use, and replace any worn, defective, or missing parts. The following conditions could represent possible hazards and increase the danger of personal injury:

• a missing, improperly positioned, or insecurely attached frame pad
• punctures, frays, tears, or holes worn in the mat or frame pad
• deterioration (wearing out) in the stitching or fabric of the mat or frame pad
• ruptured or missing springs
• a bent or broken frame or leg
• a sagging mat
• sharp points on the frame or suspension system

If any of these conditions exist, the trampoline should be taken apart or otherwise protected against use until the condition is fixed.

SPECIAL CONSIDERATIONS

High Wind

The trampoline can be blown around by high winds. If you expect high winds, the trampoline should be moved to a sheltered location, taken apart, or tied down to the ground with ropes and stakes (not included). At least three ropes and three stakes should be used. Make sure to attach the ropes to the top of the frame; do not simply secure the legs or the bases to the ground, as they can separate from the frame sockets. The tops of the stakes should be at ground level so they will not create a tripping hazard. In addition, the tops of the stakes should be covered, if necessary, so that users will not be injured by falling onto the stakes.

Moving the Trampoline

If the trampoline needs to be moved, it should be moved by two persons, kept horizontal, and lifted slightly. If necessary, the trampoline can be taken apart for moving. To take the trampoline apart, follow the assembly steps in reverse order (see pages 11 to 14). Do not attempt to take the frame sections, legs, or bases apart before the mat and springs have been removed.

ORDERING REPLACEMENT PARTS
To order replacement parts, visit our web site at www.skywalkertrampolines.com or call our toll-free Customer Care Hot Line at 1-866-603-Jump (5867), Monday through Friday, 8 a.m. until 5 p.m. Mountain Time (excluding holidays). To help us assist you, please provide the following information when calling:

• the MODEL of the trampoline (see the front cover of this manual)
• the KEY NUMBER and DESCRIPTION of the part (see the PART LIST above)
• the quantity needed
• the desired method of shipping
LIMITED WARRANTY

Skywalker Holdings, LLC warranties its trampoline products to be free from defects in material and workmanship under normal use and service conditions. The steel frame is warranted for one (1) year after the date of purchase. All other parts are warranted for ninety (90) days after the date of purchase.

All warranty coverage extends only to the original retail purchaser from the date of purchase. Skywalker Holdings, LLC obligation under this Warranty is limited to replacing or repairing, at Skywalker Holdings, LLC option, the product at one of this authorized service centers. All products for which a warranty claim is made must be received by Skywalker Holdings, LLC at one of its authorized locations. Preauthorization may be obtained by calling Skywalker Holding, LLC Customer Care Hot Line at 1-866-603-Jump(5867). This Warranty does not extend to any product or damage to a product caused by or attributable to freight damage, abuse, misuse, improper or abnormal usage, or repair not provided by a Skywalker Holdings, LLC authorized service center, or to products used for commercial or rental purpose. No other Warranty beyond that specifically set forth above is authorized by Skywalker Holdings, LLC. SKYWALKER HOLDINGS, LLC IS NOT RESPONSIBLE OR LIABLE FOR INDIRECT, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THE PRODUCT OR OTHER DAMAGES WITH RESPECT TO ANY ECONOMIC LOSS, LOSS OF PROPERTY, LOSS OF REVENUE OR PROFITS, LOSS OF ENJOYMENT OR USE, COST OF REMOVAL, INSTALLATION OR OTHER CONSEQUENTIAL DAMAGES. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES. ACCORDINGLY, THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

THE WARRANTY EXTENDED HEREUNDER IS IN LIEU OF ALL OTHER WARRANTIES AND ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE IS LIMITED IN ITS SCOPE AND DURATION TO THE TERMS SET FORTH HEREIN. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS. ACCORDINGLY, THE ABOVE LIMITATION MAY NOT APPLY TO YOU. This Warranty gives you specific LEGAL RIGHTS. You may also have other rights which vary state to state.

THIS WARRANTY IS VALID ONLY IN THE UNITED STATES.

Skywalker Holdings, LLC, PO Box 574, Brigham City, UT 84302 USA.

WARNING

Read all precautions and instructions in this manual before using this equipment. Save this manual for future reference. Maximum user weight 250 lbs.
ASSEMBLY

ASSEMBLY (PUTTING THE ENCLOSURE TOGETHER)

IMPORTANT ASSEMBLY INFORMATION

• Need phillips screw driver.
• Assembly requires two adults. Keep children away from the trampoline enclosure until it is completely put together.
• Use gloves to protect your hands from pinch points while putting the enclosure together.
• Make sure that the trampoline is properly put together, with the frame pad correctly laid out, before you put together the trampoline enclosure.
• The assembly steps refer to parts by their descriptions and key numbers (see the PARTS LIST on page 13 and make sure that all listed parts are included. If a part is missing, refer to ORDERING REPLACEMENT PARTS at the bottom of page 13.

TRAMPOLINE PLACEMENT

1. Place the trampoline and enclosure on a level surface before you use it.
2. Adequate overhead clearance is essential. A minimum of 24 feet (7.3 meters) from the ground is recommended. Provide clearance from wires, tree limbs, and other possible hazards. Lateral (sideways) clearance is also essential. Place the trampoline and enclosure away from walls, structures, fences, and other play areas. Maintain a clear space on all sides of the trampoline and enclosure.
3. Use the trampoline in an area with lots of light. If the trampoline is indoors or in a shady areas, you may need to use artificial (electrical) lighting in the area.
4. Secure the trampoline and enclosure against unauthorized and unsupervised use.
5. Remove any objects from under the trampoline and enclosure.
6. The trampoline enclosure is only to be used as an enclosure for a specific round trampoline.

1. Make sure that you understand the information in the box at the top of this page.

2. Lay one Straight Tube (6) with foam and one Curved Tube (7) with foam on the ground, insert the Straight Tube(6) into the curved tube(7), secure with the screw(5).

Repeat this step to attach the seven remaining Straight Tubes(6) and Curved tubes(7) together (not shown).
3. Lay the Jump mat on the ground. Put enclosure mesh (8) on the jump mat.

Insert one of the V-rings on the jump mat into one of the "buttonhole" incisions on the bottom edge of the enclosure mesh. Continue this process to the other V-rings one by one, until all the V-rings are inserted though the "buttonholes" of the enclosure mesh. Make certain that each of the V-rings on the trampoline mat is threaded through the corresponding 'buttonhole' in the enclosure netting, and that the door opening of the enclosure is located near the warning label of Jump mat.

4. Attach the Jump Mat to the trampoline frame by referring to steps 4-5 in the trampoline manual. Be sure to place the door opening in the enclosure netting so it is centered in between the two legs of the trampoline where the jumpers will climb off of and onto the trampoline easily as shown.

5. Attach the Frame Pad to the trampoline frame. Refer to step 6 on page 13 in your trampoline manual for further instruction.

Note: there is a Hexagon hole on the pole cap (1) with a nut inside as shown A. Insert the pole cap(1) though one strap ring on the top edge of the enclosure mesh(8) as shown in Inset Drawing B. Make sure the Hexagon hole side of the cap is against the mesh, and the holes on both the strap ring and the caps aline.

Hold the pole cap close to a curved tube (7) with foam as shown in Inset Drawing C. Insert the curved tube(7) into the pole cap. Make sure the holes on the curved tube, pole cap and strap ring aline. Insert the M5x50mm bolt(2) until it touches the nut in the Hexagon hole of the pole cap, securing them together.

Repeat this process to assemble the rest of the pole caps(1) to the curved tubes(7) with foam by the same manner.
6. **Note:** In Step 6 you will secure the enclosure poles to the frame of the trampoline.

Start from the enclosure door, lift one of the poles assembled in Step 1, see the insert drawing. Insert the Straight Tube(6) through frame pad into the top hole of the Square Socket on trampoline frame as shown. **Make sure the bent side of the enclosure poles are facing toward the center of the trampoline.**

**Note:** the end of the straight tube(6) is sharp, be careful not to hurt your hands or the frame pad.

Repeat this process to assemble the remaining seven poles to the trampoline frame.

7. Attach the straps sewn on the edge of the enclosure mesh around the outside of the cap together. To do this, pull tight and tie in a bow knot, see the insert drawing A.

**Note:** The enclosure poles are high, be careful when you attach the straps. If needed, please use a ladder.
8. Insert the end cap(4) into the bottom hole of the Socket.

9. Your trampoline enclosure is now fully assembled (put together). **Make sure that all parts are securely attached.** Familiarize yourself and all users of the trampoline and enclosure with the safety precautions, use and instructional materials, and care and maintenance instructions in this manual before using the trampoline and enclosure.

**DISASSEMBLY (TAKING THE ENCLOSURE APART)**

To disassemble the trampoline enclosure (take it apart), follow assembly steps 1 through 7 in reverse order.
CARE AND MAINTENANCE

TRAMPOLINE ENCLOSURE CARE AND MAINTENANCE

To avoid damage to the trampoline and enclosure, do not allow pets or animals inside the enclosure.

Appropriate shoes should be worn inside the enclosure to reduce wear to the trampoline mat (bed). Follow the trampoline manufacturer’s recommendations.

Continued exposure over a long period of time to the sun, especially to ultraviolet rays, will shorten the life of the enclosure fabric. For longer fabric life, store the enclosure when it is not being used. A dry enclosure, properly stored, will provide the longest life of the fabric, sewing, and hardware. Remove the enclosure from the trampoline during harsh weather conditions or during long periods of non-use.

Inspect the trampoline enclosure before each use, and replace any worn, defective, or missing parts. The following conditions could represent potential hazards and increase the possibility of getting hurt:

- missing, improperly positioned, or insecurely attached netting, enclosure tubes, or foam sleeves
- punctures, frays, tears, or holes worn in the netting or foam sleeves
- deterioration in the stitching or fabric of the netting
- bent or broken enclosure tubes
- sagging netting
- sharp protrusions on enclosure tubes

If any of these conditions exist, the trampoline enclosure should be disassembled (taken apart) or otherwise protected from being used until the condition is fixed.

SPECIAL CONSIDERATIONS

High Wind

It is possible for the trampoline and enclosure to be blown about by high winds. If you expect high winds, move the trampoline and enclosure to a sheltered location. Disassemble (take down) the enclosure netting. Tie the trampoline frame down to the ground using ropes and stakes (not included). At least three ropes and three stakes should be used. The tops of the stakes should be at ground level so that they will not create a tripping hazard. In addition, the tops of the stakes should be covered, if necessary, so that users will not be hurt by falling onto the stakes. Make sure to attach the ropes to the top of the trampoline frame: do not simply secure the legs or the bases to the ground as they can separate from the frame sockets.

Moving the Trampoline and Enclosure

If the trampoline and enclosure are to be moved a long distance, they should first be taken apart. See DISASSEMBLY ON PAGE 11. In addition, refer to the trampoline manufacturer’s user’s manual.

## ORDERING REPLACEMENT PARTS

To order replacement parts, visit our website at www.skywalkertrampolines.com or call our toll-free Customer Care Hot Line at 1-866-603-Jump (5867), Monday through Friday, 8 a.m. until 5 p.m. Mountain Time (excluding holidays). To help us assist you, please provide the following information when calling:

- the MODEL of the trampoline (see the front cover of this manual)
- the KEY NUMBER and DESCRIPTION of the part (see the PARTS LIST above)
- the quantity needed
- the desired method of shipping
